

INSTRUCTIONS FOR APPLYING VINYL DECALS

APPLY USING WET TRANSFER METHOD

- If you use Rainex try formula 409 to remove it
- Surface must be clean and free from oils, waxes and dirt, use window cleaner or alcohol to clean glass
- Mix a solution of water and dish soap (a few drops to a gallon of water). Use a spray bottle and wet area where decal is to be applied
- Remove the backing and place the decal still attached to the transfer tape to the wetted location. Use a small squeegee to squeeze the water and detergent solution out from under the decal. Allow 1-5 min drying time. Take your time because if not enough solution is removed from under the decal, it will not adhere well enough to the transfer tape. If there are any air bubbles under the decal that cannot be worked out to the edge, then a small pin can be used to puncture decal at bubble and remove air.
- Remove the transfer tape carefully by pulling at a 100degree angle. If letters begin to pull up with the transfer tape using your squeegee, go over the lettering again and once again attempt to remove the transfer tape.

APPLYING USING DRY TRANSFER METHOD

- Take a credit card and flatten both sides by rubbing over decal. Make sure all air bubbles are out
- Look to see if decals are cut for the inside or outside
- Turn decal upside down and pull backing off slowly. The backing is the heavier gauge paper. Using needle or similar pointed object, hold edges of letters and all small areas while pulling away backing. If a letter moves, just position it back in place by pushing backing down and move letters to original position. Position decal and flatten from center out. Use credit card again to flatten as much as possible. The transfer tape will allow you to rub the decal without damaging it.
- Peel back edges of transfer tape slowly, watching for small letters and corners to make sure they are stuck to surface and not to tape. Take your fingers and check all edges and make sure they are tight. If you have an air bubble, use a pin and poke a small hole allowing air to escape. The bubbles may disappear after a day or two.
- Once the decal touches the glass or paint, it cannot be removed again!
